SCREEN SHARING

## Abstract

A screen sharing system includes receiving an indication of a screen sharing condition from a remote device, receiving data from a viewing device, and hosting a screen sharing session between the remote device and the viewing device. Hosting may include making a session key available to the remote device and to the viewing device, the session key providing access to the screen sharing session, receiving session keys from both the remote device and the viewing device, and establishing the screen sharing session in response to receiving the session keys.
